Organization & Procedures in the Modern Laboratory Animal Facility

Course Synopsis:

The course aims to instruct participants on the organization and management of a modern laboratory rodent facility in all its aspects. The program includes management concepts and technological advances applicable to the facility. The course is structured in two days of theoretical lessons and one day of practical activities in an animal unit. The participants will improve their skills to face and solve everyday problems through theoretical and practical activities.

Who should attend?

Facility managers, veterinarians and senior technicians.

Contents:

Organization of a modern laboratory animal facility. Layouts, equipments and main procedures. Bio-containment and bio-exclusion: definitions and technical solutions. Functional areas and workflows. Main procedures in "clean" and "dirty" areas: different approaches and solutions. Washing and decontamination procedures. Health monitoring program. Non-animal care practices. Colony management.

Workload and weekly schedule of technicians. Per diem calculation and attribution.

Faculty:

The training team is composed of a body of expert professionals who will offer a broad training syllabus exclusively designed for all those involved in the laboratory animal field.

The final program will be circulated upon pre-registration
